## ITCS212 Web Programming

### React1: Lab-L10-1

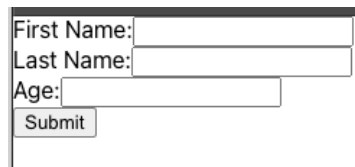

---

In this tutorial, you are going to implement some basic concepts in React.

#### Instruction

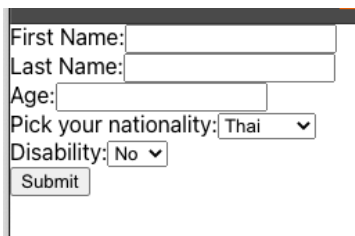

1. Initial your React application using `npx create-react-app lab101`
2. Go to **index.js**
3. You are required to create two information form (Type: normal and special) that allow users to provide the following information.

If the form type is normal,

First Name:   
Last Name:   
Age:

If the form type is special,

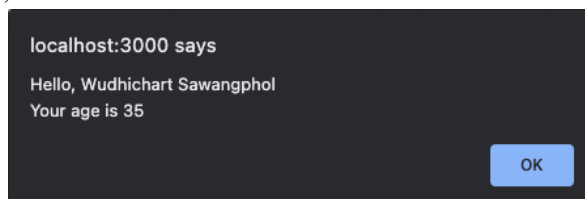

First Name:   
Last Name:   
Age:   
Pick your nationality:   
Disability:

4. In order to render the form, it is manually defined by type props, e.g.,

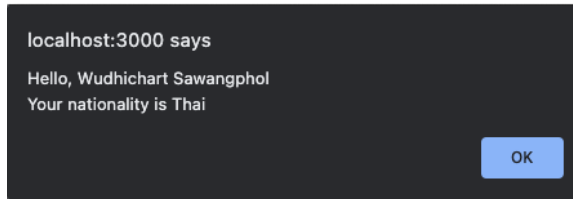

```
ReactDOM.render(<InfoForm type="normal" />, document.getElementById("root"));
```

5. After the user click on submit button, you need to print and alert the information in the following format.

If the form type is normal,

If the form type is special,

### Submission

Please submit only one **.js** file namely “**index-Lab-L10-1-[Section]-[StudentID].js**” to the activity submission on Mycourses. For example, if your id is 6588999 and you are in the section 2, your file name will be **index-Lab-L10-1-2-6588999.js**.

Note that if the file name in the incorrect format, your score will be deducted.
